

Steriline S.r.l. aims to best serve the global pharmaceutical industry by ensuring constant attention to the quality of the products and services provided.

To fully accomplish this mission, the company is organized by process and is focused on customer satisfaction and continuous improvement.

In keeping on these principles, the objectives pursued affect everyone involved in the company's processes and are laid out in a set of fundamental aims:

- To be recognized, overall, as a modern, high quality company, a point of reference in the pharmaceutical market.
- To provide clients with advanced, reliable, and cost-effective system that comply with every applicable regulation and are delivered in line with customer requests.
- To ensure effective and efficient support and after sales services, reducing customer response times.
- To research, test and validate, through the Research and Development team, innovative landmark solution in the industry.
- Studying innovative solutions that counteract the spread of viruses and bacteria in communal Areas.
- To promote product standardization through normalizing projects designs, parts and components and operational functions.
- To improve and update our technical personnel's knowledge of machinery through specific training programs covering both the theory and the practical aspects
- To appropriately test products before they are shipped in order to verify their conformity to the customer's specific requirements, as well as to every applicable regulation, and to ensure they function correctly.
- To provide a safe, secure, modern working environment, based on meritocracy, in which the company's values are known and shared by every member of staff.
- To establish partnerships with suppliers and other stakeholders in order to work together towards the constant improvement of both parties.
- Steriline has adopted a set of measures in order to be able to continue its activities even in the event of a health emergency.
